

Clear Focus ReflectVue Film

ReflectVue is a retroreflective vinyl film, the latest from Clear Focus. This 10-mil film with 1.6-mm holes in a 60/40 perforation pattern (40% open area) features a silver-gray print side with black on the adhesive back. With a retroreflectivity rate of 50%, it's engineered for window- and door-signage applications for visibility in low-light conditions, without losing the film's see-through properties.

Compatible with solvent inksets, ReflectVue further offers a removable clear acrylic adhesive and a one-year lifespan (3 months for clean removal), and is available in 48-in. rolls. If the graphic will be exposed to rain, the company suggests the printed image be laminated to prevent holes from filling with water.
